Summary

A PhD in Computer Science, motivated and solution-oriented with a variety of professional and research experience. I am working on developing computational models and frameworks for trust and understanding human cognitive states to enhance human-AI interaction. I have extensive research experience in diverse areas such as AI, human-AI interaction, human-robot interaction, reinforcement learning, machine learning, behavior modeling of humans using data, statistical modeling, automated planning, decision-making frameworks, and game theory.

Education

Arizona State University, Tempe, AZ.

- **PhD** student in Computer Engineering. (GPA: 4/4) 2018-2023
 - **Supervisor:** Dr. Subbarao Kambhampati
 - **Dissertation Title:** Computational Accounts of Trust in Human AI Interaction

Shiraz University, Shiraz, Iran.

- **Master** student in Electrical Engineering, Control. (GPA: 3.79/4) 2015-2017
 - **Thesis Title:** Nash equilibrium seeking without steady-state oscillation
 - **Supervisors:** Dr. Alireza Khayatian, Dr. Mohammad Mehdi Arefi
 - **B.Sc.**, Electrical Engineering, Control. (GPA: 3.73/4) 2011-2015
-

Experience

Research Scientist Intern

- Honda Research Institute, San Jose, CA. Sep 2022-May 2023

Key Responsibilities

- Developing modeling framework to understand and predict human cognitive states
 - Modeling dynamics of human behavior for human-automation interactions
 - Creating and validating tools to optimize system performance based on predicted human states.
-

Skills

- **Programming Language:** Python, MATLAB, Clojure, C/C++.
 - **Research and Planning:** Problem identification, Information gathering, Investigating different methods, Development, Evaluations, Analyzing and contributing results.
 - **Interpersonal skills:** Communications, Teamwork, Confidence, Self management, Flexibility, Problem solving, creative and innovative to develop new solution.
-

Current Research Projects

- **Mental-Model based Theory of Trust**

- We contextualize the user's trust and their consequent choice on whether or not to rely on the AI agent in terms of their mental model of the agent, and their preexisting expectations about the optimal way of solving the task. The agent on the other hand can either use behavior generated through its model, or explanations about its model, to influence both the user's expectations about the agent and their expectations about the task.

- **Trust Inference and Calibration with LLMs**

- We are trying to utilize Large Language Models (LLMs) as an auxiliary model to infer human trust on the AI agent and calibrate the trust to an appropriate level of trust by updating human's information bases of trust.

- **Trust-Aware Planning in longitudinal human robot interaction**

- We propose a computational model for capturing and modulating trust in longitudinal human-robot interaction where the robot integrates human's trust and their expectations into planning to build and maintain trust over the interaction horizon. By establishing the required level of trust, the robot can focus on maximizing the team goal by eschewing explicit explanatory or explicable behavior. The human also with a high level of trust in the robot, might choose not to monitor the robot, or not to intervene by stopping the robot and save their resources.

- **Game-Theoretic Model of Trust**

- In this work, we modeled a game theoretic model of trust in Human robot interaction setting and introduced a solution as a trust boundary which is a proper human's monitoring strategy given the inferred trust. By choosing a monitoring strategy in that boundary, the human supervisor can assure that the robot or the artificial intelligent system will show a safe and interpretable behavior.

- **Negotiation-Aware Task Allocation**

- We considered a task-allocation problem where an AI Task Allocator (AITA) comes up with a fair allocation for a group of humans. And the AITA is able to provide explanation in the form of negotiation tree to convince humans who thinks a counterfactual allocation is more fair.

Honors

- *ASU Iranian American Alumni Academic Scholarship,* 2023
- *Grace Hopper's Scholarship, AnitaB.org* 2022
- *Fulton Fellowship Award, Arizona State University* 2019-2020
- *Grad Fellowship Award, Arizona State University Fall 2019 and Spring 2020*
- *Hassan Mahdi Award, Shiraz University* 2018
- *Honored as **Outstanding student**, Shiraz University* 2017
- *Granted merit-based admission to M.Sc. in Shiraz University* 2015
